DEEP SEA ELECTRONICS

Model 5210 Installation and Configuration Instructions

Accessing the front panel config' editor

Press the configure/log and Stop/Reset o buttons simultaneously. The LCD configure indicator **X** will flash to indicate that the module is in 'configuration mode'.

Release the Stop/Reset O button and the configure/log O button. The first configurable parameter is now displayed. Pressing the + or - buttons will cycle through the parameters.

NOTE:- To exit the front panel configuration editor at any time, press the Stop/Reset O button. Ensure you have saved any changes you have made by pressing the \checkmark button first.

Editing an analogue value

Access the front panel config editor as detailed above. Press the +/- buttons to view the parameter you wish to change (see parameter table overleaf). Press the \checkmark button to enter adjust mode. The value to be adjusted will flash. Press the +/- buttons to adjust the parameter to the desired value. Press the \checkmark button to 'save' the value. The value will stop flashing to confirm that it has been saved. To select another value to edit, press the + button. Continuing to press the +/- buttons will cycle through the available parameters.

Editing the time

The date/time should initially be set using the 5200 series configuration software. However there may be certain circumstances where a minor change to the module's time is required. One such instance is correction for daylight saving. Access the front panel config editor as detailed above. Press the + button until the calendar is shown :

To edit the time, press the \checkmark button. The time, 4.30 in this example, will begin flashing. Press the + or - buttons to adjust the time in one minute steps until the desired time is shown. Press the \checkmark button to save the change. The time stops flashing to confirm that it has been successfully stored. Example : This display is showing a time of 4:30 on 21st October 2002.

Month

NOTE: Full configuration of the 5210 module is possible using the 5200 series configuration software for PC in conjunction with the P810 interface.

Typical wiring diagram

Dimensions

Module Dimensions - 240mm x 172mm x 57mm (9.45" x 6.77" x 2¼") Panel cutout - 220mm x 160mm (8.7" x 6.3")

Alternative AC wiring

2 phase, 3 wire (2 phase centre tap neutral)

3 phase, 3 wire
